victor marine

globally focused on cleaner solutions

Victor Marine Limited are specialists in the design and manufacture of Tank Washing Machines, Gas Freeing Fans and Oily Water Separators. Formed in 2005 from two established brands in the marine industry, Victor Pyrate and Hodge Separators, the company has over 80 years experience in supplying equipment to the marine industry.

Victor Marine is an autonomous company within the Samuel Hodge Group, a British engineering firm founded in 1897 with its origins in ship repairing and machine tool rebuilding.

Leading the field from its UK headquarters, Victor Marine has forged relationships with agents worldwide to provide shipbuilders, operators and owners with the most respected and reliable products in the marine business, including full customer support and unrivalled after-sales service.

globally focused on cleaner solutions

At present, our range of equipment is supplied to a variety of worldwide customers.
Below is just a selection of the diverse client base currently enjoyed by Victor Marine.

Tank Washing Equipment

Tank washing is a vital part of a ships operations and it is essential that the equipment onboard is reliable and fit for purpose. Failure to clean the tanks thoroughly can result in delays, large insurance claims and can even cause pollution. Victor Marine can offer twin nozzle and single nozzle tank washing machines, together with a whole range of ancillary equipment needed to operate each product which will help to avoid any of the above problems. We have a long tradition of supplying robust and efficient equipment and are proud of the reputation we have built up and retained within the worldwide marine market.

Victor Pyrate has been involved in tank washing since the formation of the company in the early 1950's and the recognition we have gained is in no small way due to our active role in the writing and implementation of the crude oil washing (COW) regulations. We strive to uphold this hard earned reputation by continuously developing and improving existing ones.

Gas Freeing Fans

Victor Marine offer a range of water and air driven portable fans which can be used to gas free tanks on VLCC's down to the smaller and more sophisticated product and chemical carriers. Gas freeing is carried out for various reasons; change of cargo, health and safety and tank maintenance are but a few, but it is essential that it is done efficiently and safely. These three factors are paramount in the design, manufacturing and development of the fans and is therefore reflected in both their performance and reputation. Our fans compliment the tank washing business and are still marketed under the Victor Pyrate brand name - one of the best known and respected names in the marine market.

Oily Water Separators

Bilge water onboard ships must be treated to the required international standard of 15ppm oil content before being discharged to the environment. Currently over 16% of all oil pollution discharges are caused by bilge water, thus oily water treatment is critical to maintain a safe and cleaner marine environment and is imperative to preserve marine life.

Probably the first company in the world to appreciate the need to reduce the amount of oil being discharged into the sea, Hodge Separators (Victor Marine), formed in 1925, have ever since remained a world leader in oil separation, by producing equipment to help to combat oil pollution. With over 3,000 units currently in operation on ferries, warships, cruise liners, tankers and yachts, Victor Marine have the experience to find a solution to your problem. The current range of bilge oily water separators have been developed to comply with the current regulations MEPC 107(49), whilst ensuring that the unit is economic.
